Each Hyena Warrior NFT has nine (8) attributes. These attributes are: Body, Cloth, Head, Necklace, Earring, Month, Eye, Weapon and Background.

NFT Metadata Privacy:

Hyena Warriors NFT Collection follows the provenance hash solution, the same gold standard that major NFT projects used in their implementation of the NFT mint.

Each NFT image is firstly hashed using SHA-256 algorithm. A combined string is obtained by concatenating SHA-256 of each image in a specific order. The final proof is obtained by SHA-256 hashing this combined string. This will be the final provenance record stored on the smart contract.

Initial Distribution of the Collection:

There are 3333 unique Hyena Warriors NFTs. Attribute traits of 7 NFTs out of 3333 are purely unique and custom made (1 out of 1). These 7 NFTs are “Unique Trait NFTs”. Another 7 full set characters exist.. Remaining 3319 NFTs of total collection are randomly generated. Distribution details can be found in Table-1 and Table-2.

Quantity	Distribution Detail
7	Will be distributed randomly during the minting process.
